FEASIBILITY AND VIABILITY ANALYSIS

Operational Viability, Deployment Feasibility, Challenges and Mitigation Strategies

✓ FEASIBILITY OF THE SOLUTION

- **Zero-Cost Client Runtime:** Operates directly in modern browsers via WebAssembly & Qualcomm QNN SDK. Eliminates cloud GPU server bills.
- **Low Maintenance & Code Independence:** Scheme datasets and disease remedies are structured in editable JSON files without redeploying code.
- **Unified Business Logic:** A single reactive communication bus (whatsappStore.js) drives the web dashboard, voice assistant, and WhatsApp simulator.
- **Auditable & Deterministic Core:** All agricultural remedies reference verified agrochemicals (Tilt, Baan, Blitox) with explicit CIBRC dosages.

■ CHALLENGES & MITIGATION STRATEGIES

- **Challenge: Fragmented Rural Internet (2G/3G)**
 - ➔ Strategy: 100% offline edge caching via PWA Service Workers and local Hexagon NPU inference.
- **Challenge: Extreme Summer Heat (45°C Field Visits)**
 - ➔ Strategy: Snapdragon NPU draws ~0.45W (vs 18.2W CPU), running cool and fanless on HP OmniBook.
- **Challenge: Multilingual & Low Literacy Barrier**
 - ➔ Strategy: Conversational Hindi/Hinglish speech recognition & voice playback + familiar WhatsApp bot.
- **Challenge: Production Scale & WhatsApp Meta API**
 - ➔ Strategy: Future-ready dual mode: local simulation today, with 1-click credentials for live Meta API v19.0.
